National Curriculum – Aims and purpose	School aims - skills, attitudes and knowledge that we would like all children to develop on their journey through the school
 Purpose of study Mathematics is a creative and highly inter-connected discipline that has been developed over centuries, providing the solution to some of history's most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject. Aims The national curriculum for mathematics aims to ensure that all pupils: - become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language - can solve problems by applying their mathematics to a variety of routine and nonroutine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions. 	 Mathematics is a key subject that covers a huge range of topics and skills. As well as practicing mental and written methods for adding, subtracting, multiplying and dividing, we learn about many other areas of mathematics such as money, measures, time, shape, statistics and co-ordinates etc. At Stapleford Primary School we have chosen to use the White Rose Education Maths Scheme of work. This excellent resource was chosen because it provides: a well planned and thorough journey through mathematics for teachers to follow excellent learning resources a high level challenge for the children. comprehensive remote learning resources quality mixed aged planning Maths Mastery The delivery of our mathematics lessons follows the Maths Mastery approach. According to most dictionary definitions, to master something is to be able to do it very well. The term 'maths mastery' has been defined as: "mastering maths means acquiring a deep, long-term, secure and adaptable understanding of the subject. At any one point in a pupil's journey through school, achieving mastery is taken to mean acquiring a solid enough understanding of the maths that's been taught to enable him/her to move on to more advanced material." NCETM website 17 October 2018.
Mathematics is an interconnected subject in which pupils need to be able to move fluently between representations of mathematical ideas. The programmes of study are, by necessity, organised into apparently distinct domains, but pupils should make rich connections across mathematical ideas to develop fluency, mathematical reasoning and competence in solving increasingly sophisticated problems. They should also apply their mathematical knowledge to science and other subjects. The expectation is that the majority of pupils will move through the programmes of study at broadly the same pace. However, decisions about when to progress should always be based on the security of pupils' understanding and their readiness to progress to the next stage. Pupils who grasp concepts rapidly should be challenged through being offered rich and sophisticated problems before any acceleration through new content. Those who are not sufficiently fluent with earlier material should consolidate their understanding, including through additional practice, before moving on.	 What can you expect to see in maths mastery lessons? In delivering maths lessons to achieve mastery, you can typically expect to see the following in maths mastery lessons: Small steps Teaching whole class together Ping pong teaching and learning Carefully chosen representations, questions and tasks CPA (Concrete, Pictorial, Abstract representations) Opportunities for pupils to think, reason and problem solve Articulating using correct maths vocabulary and speaking in full sentences Secure number facts and fluency Every week pupils are supported, in school, to learn their times tables using the Golden 100. This provides a very clear record of the progress the children have made which motivates them to keep practising. Maths homework is set every week and teachers are always available to discuss homework errors with their pupils.

Milestones:

At Stapleford Primary School children are taught in mixed age classes e.g. Years 1 & 2 together etc. Our curriculum sets out progression in the form of three 'Milestones'. The children work towards each Milestone for two years. During the first year pupils attain an understanding of the skills set out in the Milestone and during the second year they develop an advanced or deeper understanding. Each Milestone contains a range of descriptors which provide details of the skills to be covered. Over a two-year period, students become more and more familiar with these details by exploring them in a breadth of contexts. This helps pupils to "know more" and "remember more."

Links to learning in EYFS:	Links to other subjects / curriculum areas:	Experiences every child should have:
Mathematics can be linked to most subjects. Opportunities for maths in the EYFS can include: - role play shop - painting/counting dots on ladybird paintings - creating repeating patterns in art or with construction kit - singing counting songs - learning to write numbers - finding and counting acorns etc.	 Mathematics can be linked to most subjects. Opportunities for maths in the curriculum can include: recording and analysing results of science investigations hearing and counting the pulse/beat in music recording scores and times in PE learning about foreign currency in French coding in computing solving worded problems etc. 	 Every pupil should be provided with the opportunity to: learn to work with and handle real money learn from mistakes in a safe and encouraging environment (Growth Mindset – "I can't do itYET!") create and solve mathematical investigations design their own board games enjoy maths lessons outdoors use and apply mathematical knowledge to draw scientific conclusions program and control computers/devices etc.

Skills Progression: Mathematics

		Years 1 & 2	Years 3 & 4	Years 5 & 6
Threshold Concept		Milestone 1	Milestone 2	Milestone 3
Know and use numbers This concept involves understanding the number system and how they are used in a wide variety of mathematical ways.	Counting	 Count to and across 100, forwards and backwards, beginning with 0 or 1, or from any given number. Count, read and write numbers to 100 in numerals. Given a number, identify one more and one less. Count in steps of 2, 3, 5 and 10 from 0 or 1 and in tens from any number, forward and backward. 	 Count in multiples of 2 to 9, 25, 50, 100 and 1000. Find 1000 more or less than a given number. Count backwards through zero to include negative numbers. 	 Read numbers up to 10 000 000. Use negative numbers in context and calculate intervals across zero.

	Representing	 Identify, represent and estimate numbers using different representations, including the number line. Read and write numbers initially from 1 to 20 and then to at least 100 in numerals and in words. 	 Identify, represent and estimate numbers using different representations. Read Roman numerals to 100 (I to C) and know that over time, the numeral system changed to include the concept of zero and place value. 	 Write numbers up to 10 000 000 Read Roman numerals to 1000 (M) and recognise years written in Roman numerals.
	Comparing	 Use the language of: equal to, more than, less than (fewer), most and least. Compare and order numbers from 0 up to 100; use <, > and = signs. 	• Order and compare numbers beyond 1000.	• Order and compare numbers up to 10 000 000.
	Place value	• Recognise the place value of each digit in a two-digit number (tens, ones).	 Recognise the place value of each digit in a four-digit number. (thousands, hundreds, tens, and ones) Round any number to the nearest 10, 100 or 1000. 	 Round any whole number to a required degree of accuracy. Determine the value of each digit in any number.
	Solving problems	Use place value and number facts to solve problems.	• Solve number and practical problems with increasingly large positive numbers.	• Solve number and practical problems.
Add and subtract This concept involves understanding both the concepts and processes of addition and subtraction.	<u>Complexity</u>	 Solve one-step problems with addition and subtraction: Using concrete objects and pictorial representations including those involving numbers, quantities and measures. Using the addition (+), subtraction (-) and equals (=) signs. Applying their increasing knowledge of mental and written methods. 	• Solve two-step addition and subtraction problems in contexts, deciding which operations and methods to use and why.	• Solve multi-step addition and subtraction problems in contexts, deciding which operations and methods to use and why.

	<u>Methods</u>	 Add and subtract numbers using concrete objects, pictorial representations, and mentally, including: One-digit and two-digit numbers to 20, including zero. A two-digit number and ones. A two-digit number and tens. Two two-digit numbers. Adding three one-digit numbers. Show that addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot. 	 Add and subtract numbers with up to 4 digits using the formal written methods of columnar addition and subtraction where appropriate. Add and subtract numbers mentally, including: A three-digit number and ones. A three-digit number and tens. A three-digit number and hundreds. 	 Add and subtract whole numbers with more than 4 digits, including using formal written methods. (columnar addition and subtraction) Add and subtract numbers mentally with increasingly large numbers.
	Checking	• Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number problems.	• Estimate and use inverse operations to check answers to a calculation.	Use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy.
	Using number facts	 Represent and use number bonds and related subtraction facts within 20. Recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100. 	• Solve problems, including missing number problems, using number facts, place value and more complex addition and subtraction.	Add and subtract negative integers.
Multiply and divide This concept involves understanding both the concepts and processes of multiplication and division.	<u>Complexity</u>	Solve one-step (two-step at greater depth) problems involving multiplication and division.	• Solve problems involving multiplying and dividing, including using the distributive law to multiply two digit numbers by one digit, integer scaling problems and harder correspondence problems (such as n objects are connected to m objects).	 Solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign. Solve problems involving multiplication and division, including scaling by simple fractions and problems involving simple rates.

			 Use knowledge of the order of operations to carry out calculations involving the four operations.
Methods	 Calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication (x), division (÷) and equals (=) signs. Show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot. Solve problems involving multiplication and division using mental methods. 	 Multiply two-digit and three-digit numbers by a one-digit number using formal written layout. Use place value, known and derived facts to multiply and divide mentally, including: multiplying by 0 and 1; dividing by 1; multiplying together three numbers. Recognise and use factor pairs and commutativity in mental calculations. 	 Multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication. Divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context. Divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context. Perform mental calculations, including with mixed operations and large numbers.
Checking	Use known multiplication facts to check the accuracy of calculations.	• Recognise and use the inverse relationship between multiplication and division and use this to check calculations and solve missing number problems.	• Estimate and use inverse operations and rounding to check answers to a calculation.
Using multiplication and division facts	 Recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables. Recognise odd and even numbers. Use multiplication and division facts to solve problems. 	• Recall multiplication and division facts for multiplication tables up to 12 × 12.	 Identify common factors, common multiples and prime numbers. Establish whether a number up to 100 is prime and recall prime numbers up to 19. Multiply and divide whole numbers and those involving decimals by 10, 100 and 1000. Recognise and use square numbers and cube numbers, and the notation for squared (2) and cubed (3).

				• Solve problems involving multiplication and division including using knowledge of factors and multiples, squares and cubes.
Fractions This concept involves understanding the concept of part and whole and ways of calculating using it.	Recognising fractions	 Recognise, find and name a half as one of two equal parts of an object, shape or quantity. Recognise, find and name a quarter as one of four equal parts of an object, shape or quantity. Recognise, find, name and write fractions 1/2, 1/4, 2/4 and 3/4 of a length, shape, set of objects or quantity. Recognise the equivalence of 2/4 and 1/2. 	 Recognise, find and write fractions of a discrete set of objects: unit fractions and non-unit fractions with small denominators. Recognise and use fractions as numbers: unit fractions and non-unit fractions with small denominators. Round decimals with one decimal place to the nearest whole number. Compare numbers with the same number of decimal places up to two decimal places. Count up and down in tenths; recognise that tenths arise from dividing an object into 10 equal parts and in dividing one-digit numbers or quantities by 10. Count up and down in hundredths; recognise that hundredths arise when dividing tenths by ten. Compare and order unit fractions and fractions with the same denominators. • Recognise and show, using diagrams, families of common equivalent fractions. Recognise and write decimal equivalents of any number of tenths or hundredths. 	 Compare and order fractions whose denominators are all multiples of the same number. Compare and order fractions, including fractions > 1. Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements > 1 as a mixed number. Round decimals with two decimal places to the nearest whole number and to one decimal place. Read, write, order and compare numbers with up to three decimal places. Identify the value of each digit in numbers given to three decimal places. Solve problems involving number up to three decimal places. Recognise the percent symbol (%) and understand that percent relates to 'number of parts per hundred', and write percentages as a fraction with denominator 100, and as a decimal. Identify, name and write equivalent fractions of a given fraction, represented visually, including tenths and hundredths. Read and write decimal numbers as fractions.

·	•			
			• Recognise and write decimal equivalents to 1/4, 1/2, 3/4.	• Recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents.
				 Use common factors to simplify fractions; use common multiples to express fractions in the same denomination.
				 Associate a fraction with division and calculate decimal fraction equivalents.
				 Recall and use equivalences between simple fractions, decimals and percentages, including in different contexts.
Sol		• Write simple fractions for example, 1/2 of 6 = 3.	 Add and subtract fractions with the same denominator within one whole. 	 Add and subtract fractions with the same denominator and denominators that are multiples of the same
			 Solve problems involving increasingly harder fractions. 	number.
			 Calculate quantities and fractions to divide quantities (including non-unit fractions where the answer is a whole number). 	 Add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions.
			 Add and subtract fractions with the same denominator. 	 Multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams.
			• Find the effect of dividing a one- or two-digit number by 10 and 100, identifying the value of the digits in the answer as ones, tenths and	 Multiply simple pairs of proper fractions, writing the answer in its simplest form.
			hundredths.Solve simple measure and money problems involving fractions and	• Solve problems which require knowing percentage and decimal equivalents of, 1/2, 1/4, 1/5, 2/5, 4/5 and those fractions with a
			decimals to two decimal places.	denominator of a multiple of 10 or 25.Divide proper fractions by whole
				numbers.
				• Multiply and divide numbers by 10, 100 and 1000 giving answers up to three decimal places.

Describe position, direction and movement This concept involves recognising various types of mathematical movements.	• Describe position, direction and movement, including whole, half, quarter and three-quarter turns. • Order and arrange combinations of mathematical objects in patterns and sequences. • Use mathematical vocabulary to	 Identify lines of symmetry in 2-D shapes presented in different orientations. Complete a simple symmetric figure with respect to a specific line of symmetry. Recognise angles as a property of shape and as an amount of rotation. Identify right angles, recognise that 2 right angles make a half turn and 4 make a whole turn. Identify angles that are greater than a right angle. 	 reasoning about equal sides and angles. Draw 2-D shapes using given dimensions and angles. Recognise, describe and build simple 3-D shapes, including making nets. Compare and classify geometric shapes based on their properties and sizes and find unknown angles in any triangles, quadrilaterals, and regular polygons. Illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius. Recognise angles where they meet at a point, are on a straight line, or are vertically opposite and find missing angles. Identify, describe and represent the position of a shape following a reflection or translation, using the appropriate language, and know that the shape has not changed. Describe positions on the full coordinate grid. (all four quadrants)
